outcoming № \_\_\_\_\_ from \_\_\_\_\_

Dear Sirs,

This is technology park “Three Valleys” under Yakut State University (Eastern Siberia, Russia).

We offer winter proving ground testing in Yakutia for machinery and equipment manufacturers.

We are planning first products test in winter 2008-2009. Testing duration – from November till March (temperature is below - 30 °C / - 22 °F).

**Now we are collecting applications for testing and making test schedule. We offer you to test products on our proving ground.**

On our proving ground customers will be able to test products for quality and reliability in conditions of low winter temperature. The lowest fixed temperature at the Northern Pole of Cold (village Oymyakon) is - 71.2 °C / - 96.16 °F. Our advantages are severe weather conditions and reasonable prices.

Good testing results in Yakutia mean stability in all regions with low temperatures (other regions of Russia, Northern Europe, Iceland, the northern states of America, including Alaska). We give manufacturers our **special certificate “Tested in Siberia”**. Manufacturers can use testing results in products promoting on overseas markets.

For more information please visit our website [www.yakutiachallenge.com](http://www.yakutiachallenge.com)

We look forward to successful and mutually beneficial cooperation

Chief executive

Valery Petrov
